QIDA data: Summer 2017

QIDA: Quality Improvement Data Aggregator
- What we measure is what practices will work on
- Need to focus on
  - Issues where pediatricians and their offices have room for improvement
  - Issues that can be measured easily
  - Issues that are important to children

Outcomes: Proactive Pediatric Ambulatory Care Quality Vision

6 month olds: Breastfeeding
2 year olds: family strength identification, ROR

2 year olds: Family concerns and fluoride

Asthmatics: ER, Hospitalization and Controllers

Asthmatics: f/u visits and asthma action plans
Asthmatics: functional status checked, flu shot.

Asthmatics: Smoke exposure, primary care dr. recorded.

Teenagers: HPV vs. Meningococcal

Teenagers: Obesity
Teenagers: Special Health Care Needs and Strengths

Where was QTIP successful last 6 months?

- In aggregate
  - EOB literacy program
  - Fluoride screen administration
  - Asthma management (others also working on allergies)
  - Asthma Action Plans
  - Asthma Follow-up
  - Monitoring immunosupression
  - Assessing nicotine exposure
  - HPV (building on previous success)
  - Attention to obesity
  - Behavioral health (Kristen to address)
  - Schooling for Special Health Care Needs

- In selected practices
  - Breast feeding
  - Developmental screening
  - Post-Pregnancy Depression Screening
  - Identifying family and patient strengths

Fall 2017 and 2018?
- Tobacco
- Breast Feeding vs. 3-5 year olds
- Oral Health (especially fluoride varnish)
- CSHCN (NCQA PCMH)
  - Psychosocial aspects
  - Social Environmental aspects
  - Care barriers
  - Portable care plans
  - Sickle Cell
  - Asthma

Special thanks!!!!!!!!!
- To all of our practice data coordinators that made this evaluation possible. You are my heroes
