QTIP Report
Frands Rushton

- Currently have 32 participating practices
- 4 more practices waiting
- Participating practices do 10 chart audits once a month
- Documented improvements in:
  - Child health outcomes
  - Reductions in cost to Medicaid
  - Improvements in office revenue

Across all practices, well child visit rate for children less than 9 months of age increased to 94.2%

Vaccination rates for children under 9 months of age also increased to 94.2%

Breastfeeding rates increased to almost 70%

Dramatic increase in post partum depression screening
Increase in families screened for socio-environmental risk

Increase in premature births; screening for 9 month olds

Improvement in literacy promotion efforts in 2 year olds

Improvements in Adolescent vaccination rates:
- HPV 81.3%
- Meningococcal 95.4%
- Tdap 97.1%

But HPV rates (for just one vaccine) are still dramatically lower than Tdap and Mening.

Gains in adolescent behavioral health screening appear to be decreasing

Increase in percentage of teenagers screened for special health care needs. Medically complex children will continue to be a QTP focus.
Other comments

- Notable areas where no improvements were seen
  - Adolescent Well Child Visit Rate
  - Patient and Family Strengths
- Focus for 2018
  - 5 to 6 year olds with a heavy emphasis on parenting
  - Care Plans for children with special health care needs
